FLEET DASHBOARD — EVERY VESSEL, ONE VIEW

CHART MANAGEMENT FOR MODERN FLEETS

Every chart current. Every vessel accounted for.

DIDI Chart keeps the charts on every ship in your fleet up to date automatically — and shows you, from your desk, exactly which vessels are ready and which need attention.

Updating with DIDI Chart — no downloads, no DVDs, no large manual data transfers.

By integrating the DIDI Onboard Unit into the bridge setup, the vessel automatically receives the weekly chart updates — prepared, checked and ready to install. This removes administrative tasks from the crew, reduces human error, and turns chart management into a predictable routine that saves both time and cost.

Works with any ECDIS

Standard interface, by design. No hardware changes, no bridge refit, no vendor lock-in.

Fully automated updates

No USB sticks, no copying files by hand, no crew time spent on chart admin.

Always have your charts

Base data and updates stay available — so a complete chart set is ready whenever you need it.

Three steps, and none of them **belong to your crew.**

Official chart data is prepared and checked before it ever moves. The DIDI Onboard Unit brings it aboard through a controlled workflow, hands the ECDIS an installation-ready update, and confirms the result. **Your ECDIS never has to go online.**

Decorum Secure Cloud

Prepare & verify
Official chart data is verified, checked and prepared.

WHAT YOUR FLEET GETS

Works with any ECDIS

A standard interface every ECDIS already understands. No hardware changes, no bridge refit, no downtime to install.

Fully automated weekly ENC updates

The weekly ENC update arrives on its own — no USB sticks, no downloads to chase, no files walked to the bridge. Ready to install.

Base data and latest updates always available

Your complete chart portfolio stays backed up and ready — so charts can be rebuilt fast if an ECDIS loses them.

Nothing unchecked reaches the bridge

Every file is verified twice — once before it leaves, once on board — so only genuine, complete data is installed.

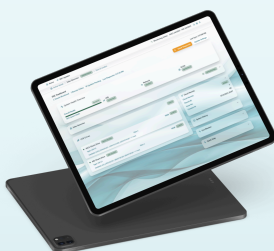

Fleet overview at a glance — no app needed

Which vessels are current, which are pending and where attention is needed — in any browser, on desktop, tablet or phone.

Proof when someone asks for it

Every update is recorded with date and result, so inspections, audits and vetting become an export.

Updates you can watch, not chase

Live progress per file, with the time remaining — and the same overview on the desk or on the bridge, wherever you are.

PROVEN ON BOARD

A true story from the fleet

It took us four days to install only the charts for our next voyage, even with support from the ECDIS team and the chart supplier. And DIDI installed **more than 8,000 base charts in just over an hour** — without a single issue!

Vessel crew, to our field service engineer during a DIDI Chart installation. Their closing remark: "You can leave the ship now — but your black box has to stay on board."

10 min

Unit on the table, two cables connected — installation already running.

8,000+

Base charts installed and fully up to date, in just over an hour.

3 hrs

Entire service job complete — vessel ready for its next voyage.
